HARMFUL PITCH IN PULP. [1963] [7]p. 3 refs.
Order from SLA \$1.10 63-18811

Trans. of Svensk Pappers-tidning, 1963, v. 66, no. 3,
p. 51-54.

DESCRIPTORS: *Pitch (Material), Flotation (Separation),
*Wood pulp.

A test method was developed, based on the principle of
pulp flotation in aqueous medium, which may be used
to determine the amount of pitch separated from wood
fibers. The total amount separated is considered harm-
ful, since it is not known whether the emulsified portion
will deposit on parts of the mechanical equipment which
are continuously in contact with pulp suspension. Fresh
softwood pitch showed an increased tendency to form
deposits due to its greater plasticity caused by terpenes
(Materials--Wood, TT, v. 10, no. 12) (over)
